

ABOUT THE COMPANY

CompuMed is a pioneer in the development of medical diagnostics that utilizes proprietary algorithms, state-of-the-art computer, and information technologies to provide physicians and patients everywhere with affordable and rapid access to critical clinical information. The Company's primary product emphasis has been in the cardiovascular arena with the CardioGram System which provides online EKG interpretations.

The most recent innovation by CompuMed is in the diagnosis of osteopenia and osteoporosis using the company's proprietary OsteoGram® System. The automated OsteoGram® enables a simple hand x-ray to be used to precisely determine bone mineral density (BMD) as an indicator of osteoporosis and future fracture risk.

The test is performed at the point-of-care, takes only seconds, and requires no special training. The OsteoGram® System is playing a major role in reducing the incidence of osteoporosis, one of the world's most prevalent and yet preventable diseases.

CompuMed is dedicated to developing medical diagnostics that provide unsurpassed clinical performance, increased accessibility, and competitive pricing. The Company takes pride in offering medical diagnostics that make a difference.
